

A BIG BED FOR LITTLE SNOW

Are you curious to see how many feathers will fall from Little Snow's big bed this winter?

When the feathery flakes fall from the sky, use a ruler to measure how deep the flakes are on the ground. Keep track of the snowfall on this chart using your high-jumping math skills.

According to picture book meteorologists:

1 inch of snow = 5 Little Snow jumps

1 inch of snow = 100 feathers

Share evidence that Little Snow is busy jumping with author/illustrator Grace Lin online with the hashtag **#BigBed4LittleSnow**. Never ever post anything online without a parent, guardian, or teacher's permission.

Look for the picture book **A Big Bed for Little Snow** (Little, Brown) and more activities like this on GraceLin.com.

Don't have snowfall? Rain can also be measured! Visit education.com and search for the "DIY Rain Gauge" to start to measure what else falls from those big bed clouds.
